KING in Radio

The KING IN RADIO line is complete.

A 5-tube style of receiver to suit the need and purse of every radio enthusiast. Two circuits—Neutrodyne and Tuned Radio Frequency—the two endorsed by eminent radio authorities as the leaders in design and proven by popular demand to give unexcelled results in service.

The tone is full and clear. The cabinets are of beautiful workmanship and design, in either walnut or mahogany. KING receivers are reliable, accurate, will give lasting service and are easy to operate. They are backed by the King organization which is noted for its precision products. King has never made anything which was "second rate".

Priced from \$85 to \$250

Election Produces Unusual Situation

**Conservatives Lead Numerically
But Have Not Got Majority
Over All Other Parties**

**Another Election Likely Within
Six Months**

The cabinet meets again, today in Ottawa in further conference. It is thought unlikely that any definite announcement will be made regarding the future parliament, until next week. The present party standings are as follows:

	New House	Last House
Conservatives	118	50
Liberals	100	117
Progressives	23	45
Labor	2	2
Independent	1	1
Doubtful	1	

Total 245 235

In a three-cornered fight in this constituency (Amdith) Robert Gardiner, Progressive, had an easy victory over his opponents, Wade, conservative, and Eaton, liberal.

The vote at Oyen poll was, Gardiner 104, Wade 70, Eaton 32.

Here and There

In 1915 Canada exported no wheat to China. In 1918 she sent only eight bushels to Japan. In 1924 China imported over 5,000,000 bushels of Canadian wheat and over 1,500,000 barrels of flour, while Japan took 7,000,000 bushels of wheat and 110,000 barrels of flour. It is predicted these figures will be well beaten for the current year.

The Grand Challenge Cup, emblematic of the First Aid Championship of the entire system of the Canadian Pacific Railway, will be competed for at the Place Viger Hotel, Montreal, November 15. The champions in a knock-out competition among Eastern and Western teams respectively, will fight it out for the trophy.

Plans are already being laid to make the 1925 Eastern International Dogged Derby an even greater success than in any previous year, and it is reported that the prize money will be considerably increased next winter, with the object of attracting more teams and mushers from the West and the United States.

Fire Prevention Week, October 4-10, was observed throughout the Dominion, and to mark the scene of the importance of the occasion Mr. Grant Hall, vice-president of the Canadian Pacific Railway, broadcast an appeal by wire to every officer and employee of the system "to co-operate as in the past and set a good example by thoroughly cleaning up all premises."

Canada's great outlook, says a recent issue of the London Outlook, is that she wants more people, but of the right type, namely, steady agricultural workers with enterprise, initiative and endurance. Enthusiasm, however, from emigrants under the joint scheme of settling 2,000 families in Canada are bound to have their healthy effect on relatives and friends disaffected with their lot in England.

E. F. L. Sturdee, general Passenger Agent for the Orient of the C.P.R., with headquarters at Hong Kong, has been appointed Assistant General Passenger Agent of the system at Montreal. His duties commenced here in October. He was relieved of his other work owing to ill-health, but the climate of Canada soon restored him to physical well-being. He has a long record of service with the C.P.R., dating back to his first appointment at Saint John in 1904.

Sixty bushels of wheat at every tick of the clock is the rate at which the Canadian Pacific Railway have carried the grain into the elevators this season. To keep up this unprecedented rush, it has been necessary to move one car-load of grain out of Winnipeg at every one minute and twenty-three seconds of the twenty-four hour day. Grain delivered at the head of the lakes by the Canadian Pacific in September alone would fill a fleet of 200 ships, each with a cargo of 200,000 bushels.

Back from an extended tour of inspection over the company's western lines, E. W. Beatty, chairman and president of the Canadian Pacific Railway, found a very marked improvement in the West as compared with that which he noticed when he last went across the country. He thought the spirit of the people was much more optimistic and with very good reason since he considered it safe to say that 280,000,000 bushels was not too high an estimate for the total Canadian wheat yield this year. He noticed throughout the country a sustained interest in immigration and a more general realization that therein lay the soundest remedy for most of Canada's difficulties.

Axminster Wheat

Samuel Larcombe Has Developed
New Variety of Rust Resisting

Wheat With Great Possibilities
Since 1916, Samuel Larcombe, of
Hartle, Manitoba, who has won so
many laurels in the field of agricul-
ture, has been devoting his time and
energy to the discovery of a wheat
equal in milling value to Red Fife and
Marquis and resistant to the ever-in-
creasing plague of black stem rust.

The wheat is the result of selecting and hybridizing seven times, and in 1924 showed less than 5 per cent. of rust infection when Marquis and other varieties, growing within five feet of it, were infected 100 per cent. This year it has done even better.

Dr. Lacombe seeded it side by side with Marquis; Dr. Saunders early Red Fife and Kota. These wheats were all seeded on the same day, under exactly similar conditions, and, with the exception of the Kota, all cut on the same day, the Kota ripening first.

Mr. Larcombe's new wheat, which he has named Axminster, has not only long, beautifully-formed heads, but the straw is absolutely a clean clear golden color throughout its whole length.

Mr. Larcombe is not making the claim that he has found the absolute resistant wheat to all forms of rust, but he is claiming, with every show of right, that he has produced a wheat

when even the Kota, which has been

widely heralded as being almost rust resistant, has succumbed. In addition to its resistance to rust the Axminster wheat, grown under exact

similar conditions, yields about 30 per cent. more than Marquis. The berries are rather longer than Marquis and not quite so dark in color as either Marquis or Red Fire.

American Tribesmen
South America's notorious headhunters can be placated with baby's tops and trinkets, according to Joseph Singewald, professor of economic geology at Johns Hopkins University, and Ernest Roschen, another geologist who have returned to New York after a trip into Interior South America for geological research. The scientists said they found no bravery among the

which for centuries have preserved the heads of their slain foes by a pro-

process by which the heads are shrunk to the size of a large orange without

losing their original proportions. Although the geologists suffered danger and hardship to reach these places, they wanted to study the fossils and they had to fear no attack from the head hunters. Hazardous canoe and motor truck trips over little means of trails were the main difficulties encountered.

House Fly Never Grows From Chrysalis

Does—Not Change After It Emerges

Seeing that the house fly is probably the commonest of all insects, it is not surprising that it is found in every part of the world, except the Polar regions, and that it is always obtruding itself upon us. It is odd that its history is so little known.

Children—and grown persons, too—

files are young files and big ones old
or files. But this is a mistake, for

An Essentially Canadian Industry, Fur Farming Is Developing At Rapid Rate, East And West

Profound inclination to continually be given of the remarkable manner in which Canada's newest industry, that of fur farming, is developing, is acting upon the popular imagination and creating fresh interest as well as periodically bringing before the people of this country the progress of the industry. With surprising frequency announcements of new success attending the efforts to bring under domestication such new species of Canada's fauna, whilst a very gratifying number of individuals, overlooking the future status of the industry and the profits to be derived therefrom, are going to join the swelling army of Canada's fur farmers.

Governments anticipating the same possibilities and recognizing the need of intelligent development and early stabilization are beginning to take steps for the encouragement of the industry and to put in effect measures for the achievement and maintenance of a high standard.

Prince Edward Island has been progressive in this regard, as is natural in the birthplace of the industry. A special reference to foxes, has been established through co-operation of provincial and federal governments to proceed with work for the benefit of fur breeders all over the Dominion. Ontario, according to recent announcement, has given its official recognition to the industry and has appointed a special officer to act as a fur farmer's adviser.

It is to establish and operate a fur farm under expert supervision for the encouragement and domestic rearing of all of the wild fur-bearing of the province. The aim of the government is to assist prospective fur farmers by collecting them and furnishing a fund of valuable information for their use, and setting them really at work for the establishment of a provincial department of agriculture of Alberta has announced that it plans to put into operation a fur market, which is designed to meet the requirements of small operators for a medium of marketing, and which will not only give the needs of trappers in the north, but also those of the growing ranks of the farmers.

Marquis-like signs of the expansion of fur farming are being everywhere to be observed on every hand. The popularity is rapidly achieved by fur farmers by their success in raising national and all over the country, sections of muchland previously considered as worthless are being transformed into profitable muskrat ranches.

The industry of chinchilla rabbit farming, recently inaugurated, promises to reach considerable proportions. Establishments for raising this little animal, introduced from Europe, have sprung through the country. Saskatchewan to thrive particularly well in the British Canadian climate and raise a richer, more valuable pelts than those now to be found in Ontario and British Columbia.

On the Pacific coast, and in fact throughout Western Canada, the industry is exhibiting a remarkable growth. Residents of that broad territory, getting away from the mammoth conception of agriculture and the railway, are extending into the gentler places, have adopted the domestic rearing of the four-bear fox, the muskrat, and the chinchilla.

On Vancouver Island, where there has been sixteen months, there were not half a dozen fur farms, there are today about forty. A similar popularity is to be observed throughout the entire province. Fur farming, far a broad, multi-phase activity developing out of fur farming, is an essentially Canadian industry whose era is but beginning. Yet already in export value it is in a nascent and it will in time become as stable as wheat growing, cattle raising or mixed farming. Fur production will slowly become institutionalized, and instead of the piles of rich pelts which from the Dominion all over the world being brought in from the Arctic tundra, they will emanate from small, intensive fur farms, raised by men living under the pleasant and social conditions.

One hundred ex-servicemen from the East End of London, after having visited the Canadian and Australian pavilions at the British Empire Exhibition, passed a resolution urging the British Government to spend a portion of the date for the establishing of unemployed men in positions in the overseas dominions.

Lightning strikes oak trees most frequently, and after the oak comes the elm, chestnut and pine.

Being drawn out is all right; but there is a danger. Broad streams usually are very shallow.

W. N. U. 1601

Factors in Milk Contamination

Proper Procedure to Follow in Order to Produce Clean Milk

In the interest of the dairy industry, recently organized division of bacteriology of the Dominion experimental farms, covering the year 1924, it is shown that the factors that stand out prominently in the contamination of milk are, first, carefully cleaned pails, and, secondly, the health and cleanliness of the animal itself. Pails should be carefully cleaned and well dried. Care should also be taken to see that no dried manure particles get into the pail during milking. Dr. A. Grant Luchford, the Dominion agricultural bacteriologist, who is responsible for the report, which can be had at no cost on application to the publication branch of the Dominion Experimental Farms, deals with other factors that are apt to cause milk contamination. Tests have been made at the central experimental farm to ascertain how milk is affected and statistical tables are supplied showing to what degree milk may be contaminated by unsanitary conditions pertaining to the milker, house, stable and utensils. A clean pail, a covered pail and a clean animal are the three most important factors in producing clean milk. A study is in addition given of bacteria producing a bitter flavor in milk, of the effects of fatness and acid of the milk, and of the effects of fatness. Cleanliness is next to godliness in agriculture the same as in life.

Record Cattle Shipments

Record Revenue For 1925 From British Markets Over \$12,000,000

With the close of 1925, Canada's cattle shipments to the United Kingdom for the year will be constituting a record of 10,000 head, constituting a record. The monthly average will be over 16,000. In money the year's total will be over \$12,000,000.

The British admiralty some time ago took over control of certain wharves for their own purposes, so that there is no wharfrage now available for the discharging of Canadian cattle.

In the near future it is hoped that success will crown the negotiations for the extension of the British and Canadian authorities for a highly specialized system of ocean cattle transportation that will reduce the cost and ensure regularity of delivery at British ports.

Record Movement of Wheat

Grain Market on C.P.R. Lines at the Rate of Seventy-five Bushels Per Second

More than 70,000,000 bushels of wheat, 90 per cent. of which has graded content, has been marketed in the prairie provinces during the month of September, as shown by the railway reports. This is a record movement.

It is all the wheat marketed during the month along the Canadian Pacific Railway were hauled into bread and loaded on standard delivery wagons, each wagon containing one thousand bushels, and travelling at the rate of five miles per hour, it would take eight and a half weeks for these wagons to pass a given point. The marketing of grain on the C.P.R. in September amounted to 62,269,247 bushels. In twenty-five nine-hour working days, that is at the rate of 75 bushels per second.

British Cattle Raisers Worried

Pest and Mouth Disease Has Again Broken Out

Cattle farmers are worried over a report that the disease of the foot and mouth disease at several places in England. Scarcely had the minister of agriculture's withdrawal of his last resolution from dealing with the disease been announced when an isolated outbreak was reported. Since then there have been several more outbreaks.

The restrictions have been reimposed in some places, notably Manxchester, where hundreds of cattle and sheep are brought in from Wales and Westmorland and slaughtered. Under the restrictions, any sheep or cattle coming in must be immediately slaughtered.

Women are to be employed exclusively as announcers in the new broadcasting station in Tokyo, Japan.

After a woman reaches the age of 30 it is impossible to convince her that the good old days.

Dairying Makes Progress

Nine New Creameries Established in Saskatchewan This Year

That there is confidence in the future is shown by the fact that nine new creameries have been established in Saskatchewan this year. While the majority of these are in the northern and central portions of the province, three are in the south, in the heart of the grain growing section, where a few years ago dairying was not by any means considered an important branch of agriculture. P. O. Kidd, dairy commissioner for the province.

In addition to the new creameries, five new cheese factories have been built and have commenced operations and two creamery companies have been organized in the province for making cheese. As in the case of the creameries, the new cheese factories are situated in the districts ranging from the extreme north to the southern part of the province.

It is worthy of note that most of them have been established at points which can be had at no cost on application to the publication branch of the Dominion Experimental Farms, which deals with other factors that are apt to cause milk contamination.

Obstacles in Way of Free Trade

Canadian Director's Immigration Scheme Commented On By London Paper

The Nation, a London weekly, discusses the migration scheme of J. Bruce Walker, Canadian director of foreign migration, who is, in outlining his programme for obtaining emigrants for the Dominion, suggests that centres might be set up in the United Kingdom for training in agriculture of the surplus of the unemployed and through these training centres 20,000 men could be absorbed in Canada within a year.

If Bruce Walker should be justified in his undertaking all parties in England will rejoice. The Nation says but the paper intimates that the carrying out of the scheme may not be so simple because of the Dominion's attitude as to the sort of immigrants desired.

The Canadian immigration authorities have been rigorously selective, the Nation comments, "and they certainly will not relax under the new system. Preference" will be given to the best material from the land and to skilled artisans. In other words, the drain of Canada's best must be minimized.

Canada no other policy is conceivable, but Bruce Walker's plan gives urgency to the need for a considerable emigration policy for Great Britain.

See Danger in Liquor Traffic

Women doctors, lawyers and economists of Germany favor local option and see in the excessive use of alcohol the cause of many ills, including Germany. They held a joint conference, with delegates from the Association of German Women Physicians, the Federation of Women Lawyers and the Association of Women Economists, at the conclusion of which a resolution was adopted recommending the holding in favor of local option.

Only a few more weeks before winter will be upon us. Better be looking for an old flame.

Health Of Our Livestock

Good Progress Has Been Made in the Control of Disease

There is much of a comforting nature in the report for 1924-25 of the health of animals branch of the department of agriculture at Ottawa. The veterinary director general, Dr. George Hill, in reviewing the contagious disease situation in Canada shows that the animal diseases that a few years ago were troublesome have been banished from the country. Brucellosis has not been detected in any Canada for several years. No outbreaks of dourine has been reported among breeding horses for five years, and there is every reason to believe the infection does not exist in this country. Only one outbreak of anthrax was reported in the year, and that was in British Columbia and was brought speedily under control. The mauls is extremely rare in Canada. By vigorous action hog cholera has been practically eradicated. Suspected glanders not being promptly reported in unprogressive settlements at Minnesota there has already been necessary and has proved effective, but close supervision is being kept to prevent recurrence.

There is a good quality of high yielding crosses in a highly resistant strain of tulip. At Minnesota there has already been developed a highly resistant cross between Marquis and tulip, which is known as Marquis-tulip 44. This cross is of good quality, high yielding, combining in a highly degree the milling qualities of Marquis, as well as the strength of structure of tulip, and the flour is too yellow to be satisfactory to the millers. It is hoped by back-crossing Marquis with tulip that a strain may be produced which will have the flour color of Marquis combined with the rust resistance and other desirable qualities of Marquis-tulip 44.

It will take many years and many hundreds of crosses together with careful selection and testing before the desired results are obtained. In undertaking these experiments the scientist in charge knows it is very difficult to get an assurance that a quality what immune to all rust strains may ever be discovered.

There is also a tuberculosis free area in the Carman district in Manitoba, which is being dealt with under the restricted area plan. All cattle in an area comprising the counties of Huntington, Cataraugus and Beauharnois in the province of Quebec have also been tested by veterinary inspectors and reactors destroyed. There is every reason to believe that this area will be a tuberculosis free area by the time the next annual report is issued.

The White Collar Job

The old idea that a white collar job is a low class one is better than the overall job at high wages has been abandoned pretty generally since the shirt collar and clothes have advanced. Men, especially those with families, must have money, and they no longer look at the necessity to earn it in the clothes—New York Herald-Tribune.

Epilamin: "What you all did when I got married three times—Blighty."

Rastus: "Laway, boy, you ain't any an incommensurate. Why, when a girl gets married two times, it ain't no big deal; but when she gets married three times, that's a trigonometry."

Birds' chant by night. Birds of prey depend upon the sense of smell.

Sugar Beet Cultivation May Prove A Great Factor In The Prosperity Of Western Canada

Making Progress In Fight Against Rust

Saskatoon Scientists Make Further Discoveries in Complicated Struggle

The rust work done for some years at the University of Saskatchewan is assuming new phases in the plant breeding experiments conducted in the cereal breeding section of the field husbandry department.

The end in view is a wheat that will have all the good qualities of the best strains of Marquis wheat which will also be highly resistant to all the rust strains found in Canada. During the past season a large number of crosses were made with Marquis on a highly resistant strain of tulip. At Minnesota there has already been developed a highly resistant cross between Marquis and tulip, which is known as Marquis-tulip 44. This cross is of good quality, high yielding, combining in a highly degree the milling qualities of Marquis, as well as the strength of structure of tulip, and the flour is too yellow to be satisfactory to the millers. It is hoped by back-crossing Marquis with tulip that a strain may be produced which will have the flour color of Marquis combined with the rust resistance and other desirable qualities of Marquis-tulip 44.

It will take many years and many hundreds of crosses together with careful selection and testing before the desired results are obtained. In undertaking these experiments the scientist in charge knows it is very difficult to get an assurance that a quality what immune to all rust strains may ever be discovered.

City and Country Co-operation

The City Should Work Actively For Rural Prosperity

Some years ago city people used to ridicule country people, and country people felt jealous of city dwellers. While much of this exchange of sentiment was fairly good natured, yet it often went so far as to create antagonisms that destroyed all co-operation. Today, the cities and country regions are discovering that they are interdependent. It is a shame for city and country to quarrel, as for a merchant to quarrel with his customers, for a business man to quarrel with his help. The time is fast coming when a city and the country around it will be considered an indivisible unit with identical interests. The city will work actively for rural prosperity to increase its own business, and the rural people will work for the advance of their centre to provide a stronger support for their enterprises.—Salem News.

The new million dollar beet sugar refinery at Saskatoon, near the city of Saskatoon, at Harton, in Southern Alberta, has started operations, resulting in the resumption of a sugar beet industry in that territory under much finer auspices. It is now evident that this new Alberta activity is away to a good start, and with the successfulness of foundation, has great possibilities.

After extensive investigation and preparation United States interests entered the Southern Alberta field for the refining of sugar from beets in the spring of 1925. Promises were made to erect a sugar refinery at Harton, in the heart of the irrigated district. If farmers would contract for an acreage of 5,000 acres of beets. It is estimated that 7,200 acres have been signed up, and reports during the past season from the agricultural stands were 90 per cent. perfect. The beet sugar crop in Southern Alberta, it is officially stated, is exceptionally good, and it would not be surprising if the tonnage produced reached 20,000 tons.

Such a successful year of inception opens up great possibilities for the sugar beet industry in Alberta and all Western Canada. The possibility of the industry from the agricultural standpoint in the area has never been in question, climate and soil being particularly favorable. Experimentation has proven an excess in both moisture and sugar content in Southern Alberta production over that of the Western states.

Farmers in the area have been enthusiastic over the possibilities of the sugar beet as a much wider and more general interest in both moisture and sugar content in Southern Alberta production over that of the Western states. The possibility of the industry from the agricultural standpoint in the area has never been in question, climate and soil being particularly favorable. Experimentation has proven an excess in both moisture and sugar content in Southern Alberta production over that of the Western states.

Apart from the revenue derived from the actual sale of the beets, for which a ready market is assured, the industry offers the general agricultural situation of the beet growing districts is to be expected. From the development of a irrigated industry and other phases, such as have been the experience of similar sectors in the United States. Authorities are confident that it will prove one of the greatest factors in the prosperity of Western Canada, and there is every opportunity for expansion of the industry there.

Trees Worth Three Million

New York City Finds Tree Farming Is Profitable

Trees cannot, it is true, be made by fiat, but they can be raised with such loving care and skill by someone who has studied them and understands their needs. The city of New York that someone in beauty and economic value.

Mrs. Evelyn W. Smith, of Amherst, N.Y., has for ten years been a devotee of tree farming—that her estate at the foot of the Berkshire hills, 1,000,000 trees, worth about \$3,000,000. For sixteen years Miss Smith has worked at her tree culture with patience and enthusiasm until today her nurseries are visited by admiring tree lovers, landscape architects and college forest specialists interested in the results of her experience.

The sturdy, beautiful Amherst trees are as much in demand for ornamental purposes as for landscape decoration. "Only a short time ago a beech was sent to Belgium to express by a living symbol the friendship between the children of the two nations."

Getting Rid Of Farm Pests

More than a quarter of a million crows' eggs, crows' feet and gopher tails were gathered in the Crow and gopher extermination campaign carried on this season by the Manitoba department of agriculture. The exact numbers are: Crows' eggs, 175,519; crows' feet, 3,843; gopher tails, 45,150. The province has distributed \$2,160 in prize money.

The Equinox Myth

In days gone by farmers looked for storms in the week following the 20th of September, this being the vernal equinox. It is now known that it is no more likely to be stormy this period than at any other time during the early fall.—Port Huron News

About Town and Country

Monday, November 9, Thanksgiv-
ing Day, is a Dominion holi-
day. All stores closed.

The Ladies' Aid of Fairacre
United Church will give a fowl
supper Thanksgiving night at
Glenda School at 7 p.m., follow-
ed by a programme and com-
munity singing. Adults 25c.
Ladies please bring baskets.

The Ladies' Aid of the United
Church will hold a bazaar on
Saturday November 28, in the
Masonic Building, commencing
at 2 p.m. Afternoon tea will
be served.

On Saturday, November 7, the
first class in "Home Nurs-
ing" will be held at the United
Church, Oyen, at 2.30 p.m., in
charge of Mrs. W. V. Miller.
This is the first of a series of 12
classes, which will be held every
Saturday afternoon, at the
same hour, until the course is
completed. All ladies are cordi-
ally invited.

Mrs. W. F. Pratt left this
morning to spend a few days in
Calgary.

NOTICE

The Municipal District of Golden
Centre, No. 272, offers for
sale to the highest tender, house
on the S.E. 23-29-1-W. 1th.

Tenders must be received by the
undersigned by 12 o'clock
noon, on Wednesday, November
4, 1925. Right reserved to re-
ject any or all tenders.

Dated at Oyen, Alta., this 9th
day of October, 1925.
Ralph Greene, Sec. Treas.

IF you want investment advice—good,
sound investment advice, based on long
and varied experience—you cannot do
better than confer with the Bank of
Toronto branch manager.

How to dispose of your crop profits.
Whether to put them in a bank, bonds or
mortgages. How to obtain loans for farm
expansion—all these questions will be
answered gladly and wisely by the Bank
of Toronto.

The Bank of Toronto will give you
that fine service and cordial treatment
that has earned for it the name of "the
friendly bank."
